CONSUMER EXPECTATIONS SURVEY REPORT

4th Quarter 2025

Q4 2025 CONSUMER EXPECTATIONS SURVEY

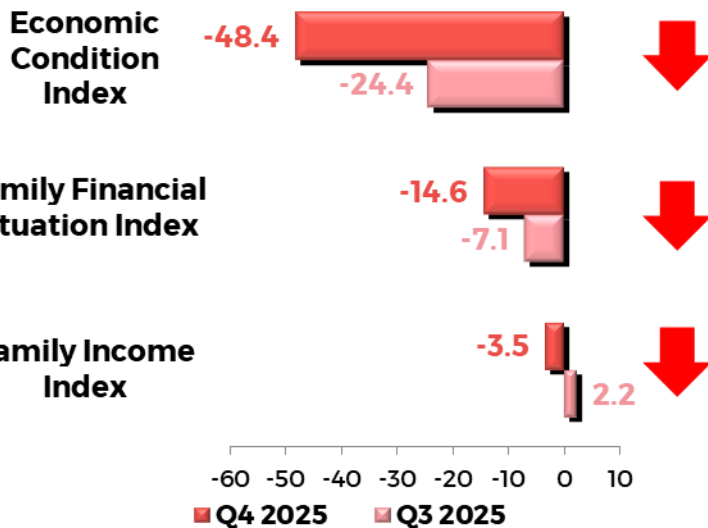

OVERALL CONSUMER OUTLOOK INDEX

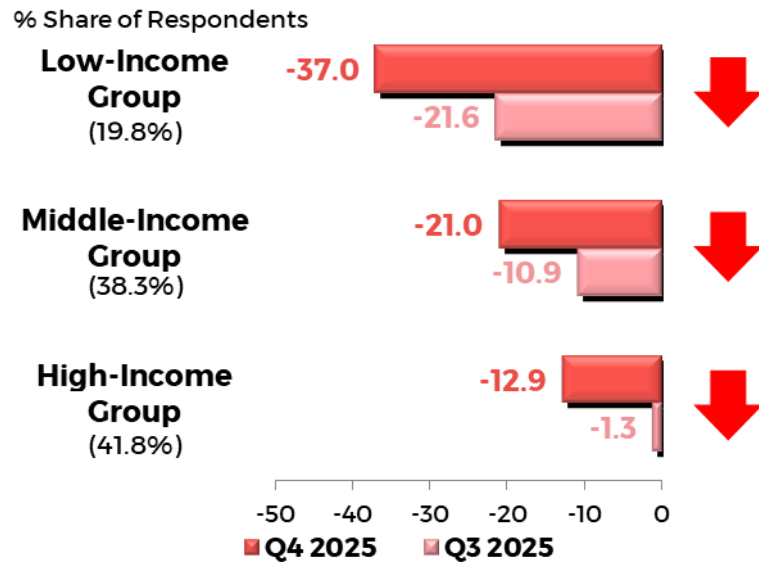

The weaker confidence among consumers in Q4 2025 was mainly due to concerns over:

-  Craft and corruption in the government
-  Higher inflation
-  Lower household income
-  Unfavorable weather conditions and other natural calamities

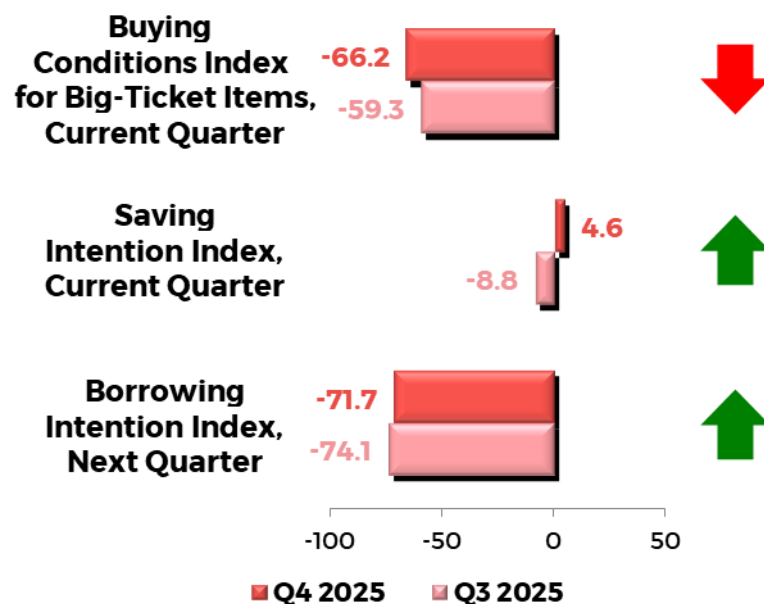

CONSUMER OUTLOOK BY COMPONENT INDEX

CONSUMER OUTLOOK BY INCOME GROUP

SENTIMENT INDICATORS

ECONOMIC INDICATORS

Indicator	Period	Current Quarter	Next Quarter	Next 12 Months
Inflation Rate	Q4 2025	55.0	28.8	30.0
	Q3 2025	43.4	29.5	24.9
Peso Borrowing Rate	Q4 2025	31.5	30.5	32.5
	Q3 2025	26.9	25.2	28.4
Exchange Rate (₱/US\$)	Q4 2025	-21.5	-10.6	-8.7
	Q3 2025	-12.9	-12.3	-7.3
Unemployment Rate	Q4 2025	25.2	25.0	27.4
	Q3 2025	32.5	10.6	14.7

Based on the Diffusion Index (DI) of the reference period:

- +/- Inflation Rate - more respondents expect that inflation may increase/decrease
- +/- Peso Borrowing Rate - more respondents expect that the peso borrowing rate may increase/decrease
- +/- Exchange Rate - more respondents expect that the peso may appreciate/depreciate against the US dollar
- +/- Unemployment Rate - more respondents expect that the number of unemployed persons may increase/decrease

Note: Starting Q2 2022, the questionnaire was enhanced to include expectations on the direction of the inflation rate in the current quarter, and for the next quarter and the next 12 months.

NO. OF RESPONDENTS
(RESPONSE RATE | MARGIN OF ERROR):

Philippines: 5,489
(98.9% | 1.3%)

NCR: 2,443
(99.0% | 2.0%)

AONCR: 3,046
(98.8% | 1.8%)

1 - 13 October 2025

Legend:  Up  Down  Steady (for diffusion indices with less than 1 percent absolute difference) as compared with the previous survey round

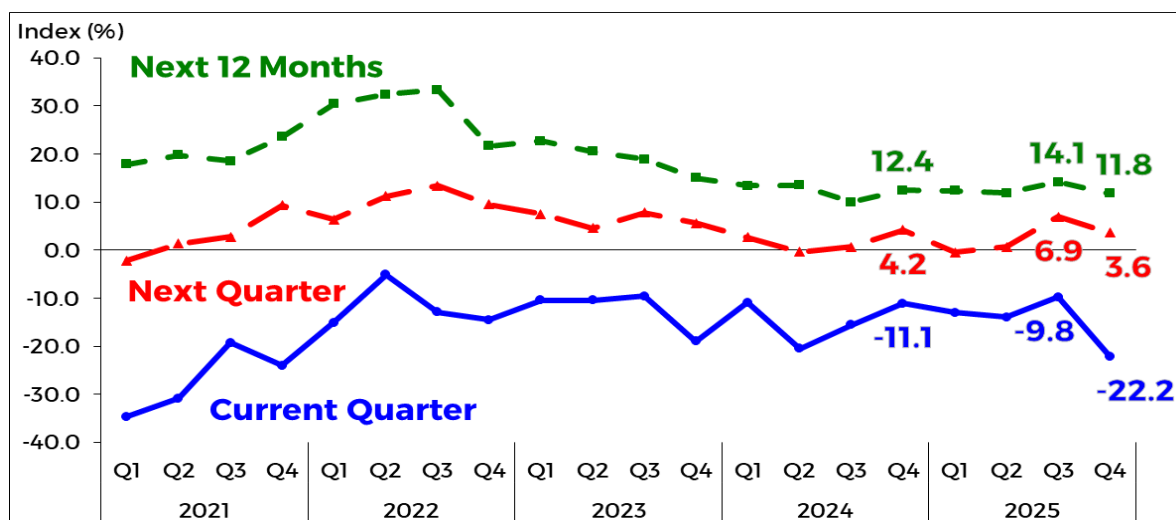

CONSUMER EXPECTATIONS SURVEY¹

Fourth Quarter 2025

**Consumer Confidence Declines in Q4 2025,
Stays Upbeat in Q1 2026 and the Next 12 Months**

Nationwide Consumer Outlook

Figure 1
Overall Consumer Outlook Index
Philippines
Q1 2021 – Q4 2025

The consumer sentiment in the fourth quarter of 2025 was more pessimistic as the overall current-quarter confidence index (CI) turned more negative from -9.8 percent in Q3 2025 to -22.2 percent in Q4 2025 (see Table 1). This reflects a combined decrease in the percentage of optimists and an increase in the percentage of pessimists. The weaker confidence among consumers in Q4 2025 was mainly due to concerns over: (a) graft and corruption in the government, (b) higher inflation, (c) lower household income, and (d) unfavorable weather conditions and other natural calamities. Consumers were also concerned about the effective delivery of government services amid public discontent over governance-related issues.

Similar to the Philippines, consumer sentiment in Australia, Taiwan, and the United States turned more pessimistic. Consumer confidence also weakened in South Korea as households became less optimistic. By contrast, consumer sentiment improved in Indonesia, the euro area, Japan, and Thailand.²

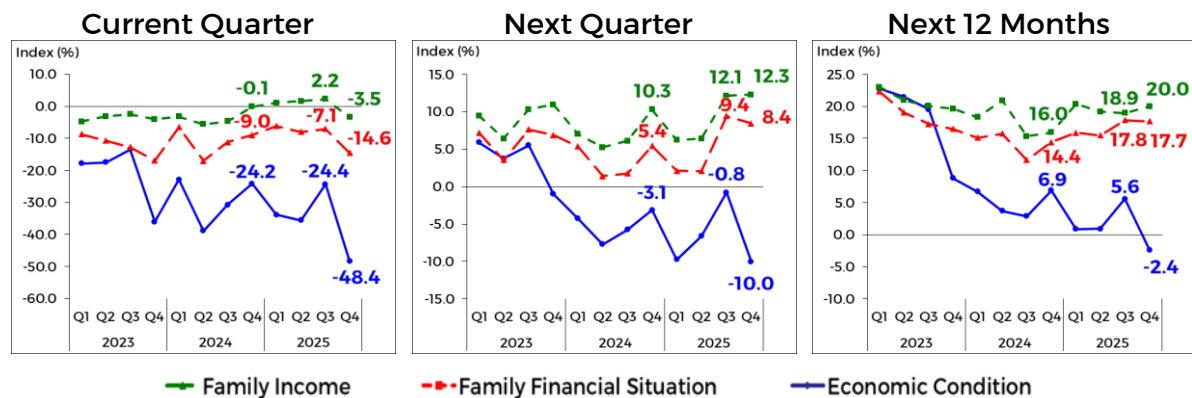

¹ The Consumer Expectations Survey (CES) is a quarterly survey of a random sample of about 5,000 households in the Philippines. The CES covers three component indices of the consumer outlook—overall economic condition, family financial situation, and family income. Results of the CES provide advance indication of consumer sentiments for the current and next quarters and the next 12 months, as reflected in the overall CI, as well as in the selected economic indicators. The Q4 2025 CES was conducted during the period 1-13 October 2025.

² The reference countries were the top trading partners of the Philippines, wherein each accounted for at least one percent share of the country's total merchandise trade for the past five years (2020-2024). Australia, the euro area, Indonesia, Japan, South Korea, Taiwan, Thailand, and the United States of America publish a consumer confidence index on a monthly basis. For cross-country assessment of the consumer sentiment, the latest CI level is compared with the CI level of the previous reference period as posted in <https://tradingeconomics.com/>.

The next-quarter (Q1 2026) overall CI decreased from 6.9 percent in Q3 2025 to 3.6 percent in Q4 2025 (see Table 1). Meanwhile, the year-ahead (November 2025-October 2026) CI declined from 14.1 percent in Q3 2025 to 11.8 percent in Q4 2025. The less buoyant outlook of consumers for both periods reflected the same concerns as in Q4 2025.

Figure 2
Consumer Outlook Index by Component Index
Q1 2023 – Q4 2025

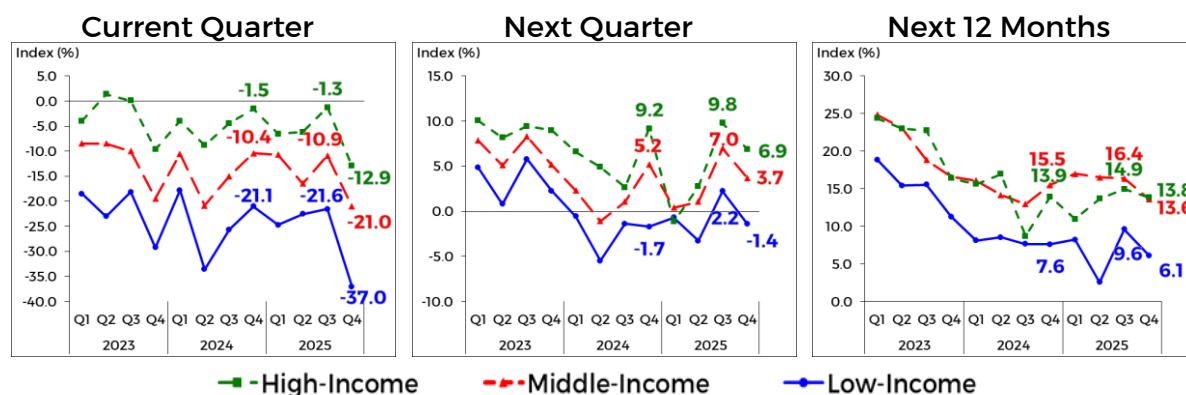

All three component indices (i.e., overall economic condition, family financial situation, and family income) declined in Q4 2025. The overall economic condition index dropped to -48.4 percent, its lowest level in five years. The family financial situation index decreased from -7.1 percent in Q3 2025 to -14.6 percent in Q4 2025. Meanwhile, the family income index reverted to negative territory at -3.5 percent after three consecutive quarters of positive values (see Table 2).

For Q1 2026, consumer outlook was more pessimistic regarding the country's economic condition, less optimistic for the family's financial situation, and remained upbeat for family income (see Table 3). For the next 12 months, consumer sentiment turned pessimistic for the country's economic condition, stayed upbeat for the family's financial situation, and more optimistic for family income (see Table 4).

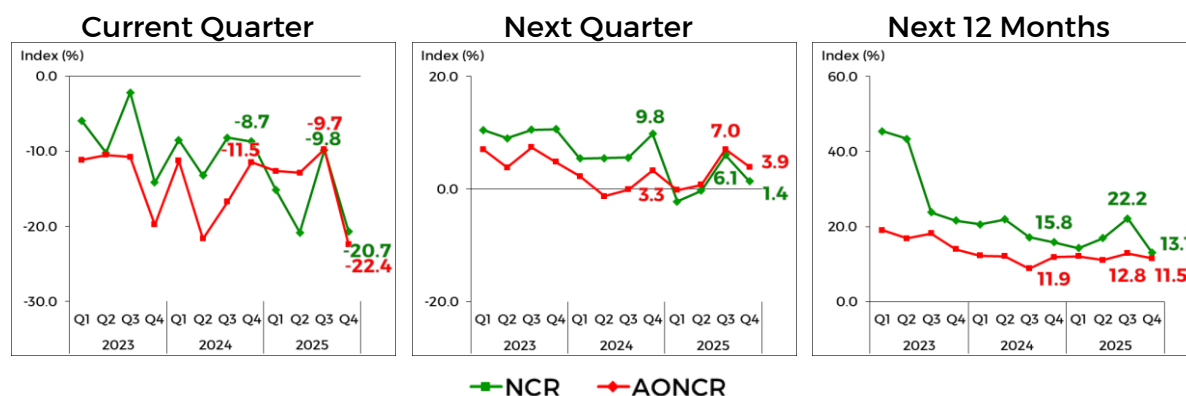

Figure 3
Consumer Outlook Index by Income Group
Q1 2023 – Q4 2025

Consumer confidence also weakened across all income groups in all reference periods (see Table 1).³ Notably, the low-income group has recorded its lowest current-quarter CI since Q2 2021.

NCR and AONCR Consumer Outlook

Figure 4
Consumer Outlook Index for NCR and AONCR
Q1 2023 – Q4 2025

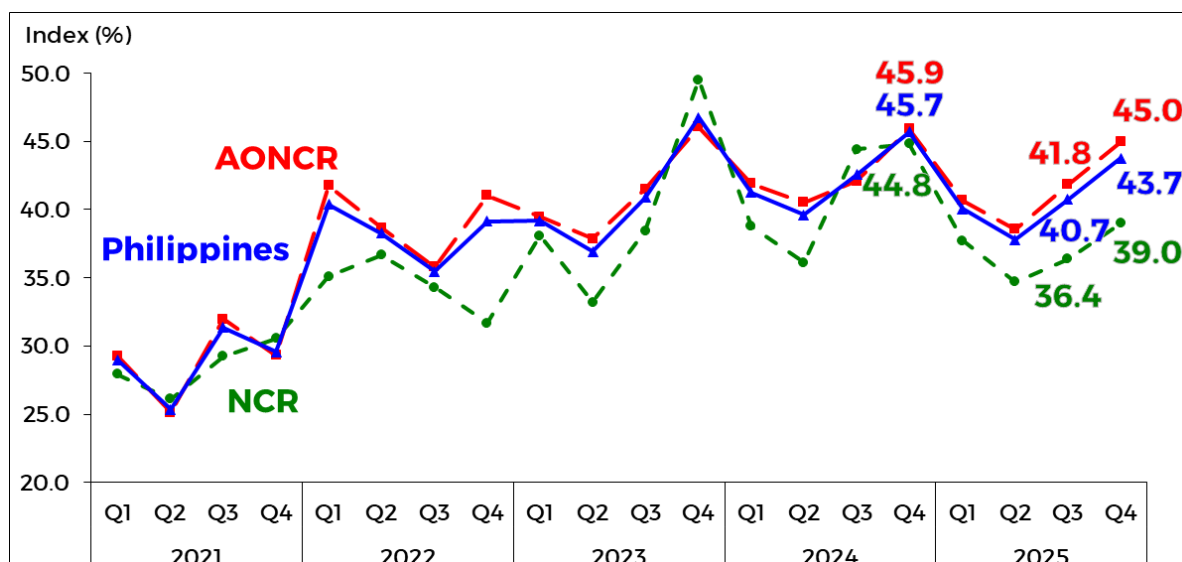

Consumer sentiment declined across the main geographical areas in all reference periods. Consumers in both the National Capital Region (NCR) and Areas Outside the NCR (AONCR) were more pessimistic in Q4 2025 (see Table 1). Similarly, consumer outlook in both areas was less optimistic for both Q1 2026 and the next 12 months.

³ Low-income group refers to households with monthly family income of less than ₱10,000. Middle-income group refers to households with monthly family income between ₱10,000 and ₱29,999. High-income group refers to households with monthly family income of more than ₱30,000. The monthly family income is estimated using the income of the respondent, spouse, and other family members. Beginning Q1 2019, monthly family income was estimated to include OFW remittances received in the last 12 months.

Expenditures on Goods and Services

Figure 5
Next Quarter Expenditure Outlook on Goods and Services
Q1 2021 – Q4 2025

The household spending outlook on goods and services for Q1 2026 was more upbeat, as the CI increased from 40.7 percent in Q3 2025 to 43.7 percent in Q4 2025. Across geographical areas, the spending outlook of consumers in both the NCR and AONCR mirrored the national trend (see Table 5).

Spending outlook was more upbeat for the following consumer items: (a) food, non-alcoholic and alcoholic beverages, and tobacco; (b) house rent and furnishing; (c) water supply; (d) electricity; (e) health; (f) transportation; (g) education, recreation, and culture; (h) restaurants and accommodation services; and (i) personal care and miscellaneous goods and services. By contrast, the spending outlook was little changed for (a) information and communication and (b) clothing and footwear, while it was unchanged for gas and other fuels (see Table 5).

Expenditures on Big-Ticket Items: Consumer Durables, Motor Vehicle and Housing

Figure 6
Sentiment on Buying Big-Ticket Items
Q1 2021 – Q4 2025

The current-quarter buying sentiment was more pessimistic as the CI declined from -59.3 percent in Q3 2025 to -66.2 percent in Q4 2025. In particular, buying sentiment for motor vehicles registered the most pessimistic outlook, followed by consumer durables, and house and lot. By area, sentiment on buying big-ticket items for Q4 2025 remained pessimistic in the NCR and turned more pessimistic in the AONCR (see Table 6a).

Similarly, buying intentions for the next 12 months turned more pessimistic from -68.2 percent in Q3 2025 to -70.1 percent in Q4 2025. Specifically, buying intentions declined across categories, except for consumer durables, which were little changed. By area, buying intentions for the next 12 months were more pessimistic in both the NCR and AONCR (see Table 7a).

The percentage of households planning to buy/acquire real property within the next 12 months increased slightly from 5.6 percent in Q3 2025 to 6.2 percent in Q4 2025 (see Table 7). Notably, a higher proportion of households intend to acquire residential and agricultural lots (see Table 8).

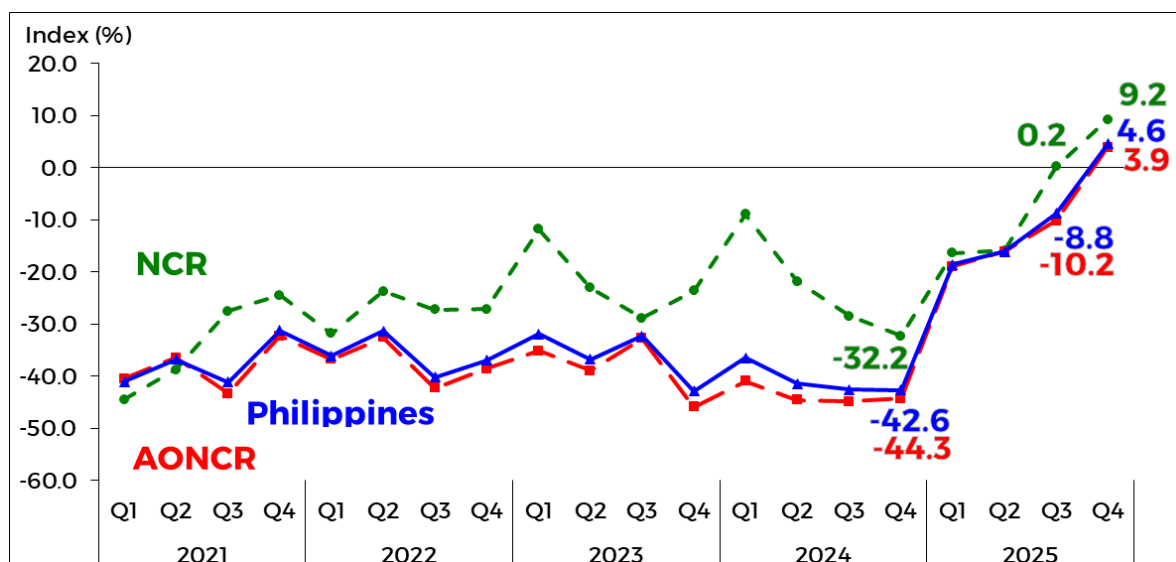

When asked about the price range of real properties they intend to purchase over the next 12 months, more than half of households (53.5 percent) indicated a preference for properties valued at ₱450,000 or less. Meanwhile, 28.5 percent of households plan to buy a house and/or lot valued at ₱450,001 to ₱1,700,000, while 18.0 percent intend to purchase properties valued at ₱1,700,001 and above (see Table 9).⁴

⁴ Beginning Q2 2018, questions on the type and the amount of house and/or lot intended to be bought by households were added to the CES questionnaire. The property classification was based on the Housing and Land Use Regulatory Board Memorandum Circular No. 13 series of 2017, which classified housing units as follows: (a) Socialized Housing for housing units with selling price of ₱450,000 and below, (b) Economic Housing for housing units above ₱450,000 to ₱1,700,000, (c) Medium Cost Housing for units above ₱1,700,000 to ₱4,000,000, and (d) Open Market Housing for units above ₱4,000,000.

Savings Sentiment⁵

Figure 7
Saving Intention Index
Q1 2021 – Q4 2025

Consumer sentiment on saving turned optimistic as the saving intention index reverted to positive territory from -8.8 percent in Q3 2025 to 4.6 percent in Q4 2025 (see Table 10a). Among households that plan to save, the proportion intending to set aside at least 10 percent of their monthly gross family income rose from 23.9 percent in Q3 2025 to 29.7 percent in Q4 2025. Conversely, the share of households that would allocate less than 10 percent declined from 76.1 percent in Q3 2025 to 70.3 percent in Q4 2025 (see Table 10).

Selected Economic Indicators

Consumers anticipate that interest rates may increase and that the Philippine peso may depreciate against the US dollar in Q4 2025, Q1 2026, and over the next 12 months. Households likewise expect that the unemployment rate may rise during the same periods (see Tables 11a, 11b, and 11c).

⁵ Beginning Q1 2025, only forward-looking questions on household savings were retained in the CES questionnaire due to the streamlining of BSP surveys.

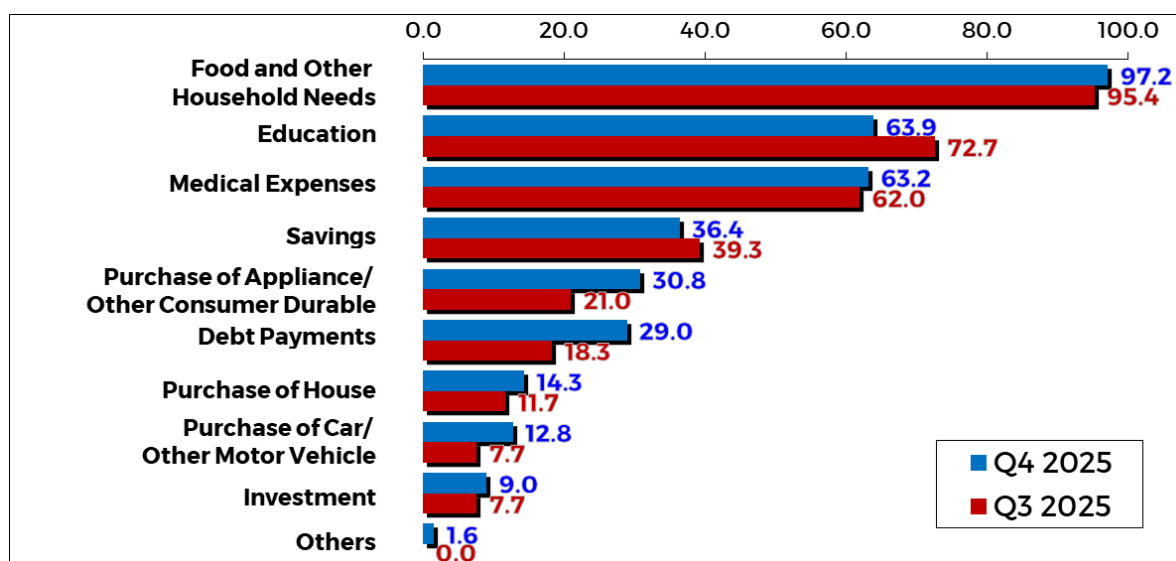

Inflation Expectations

Households expect that the inflation rate may increase in the near term and over the next 12 months.⁶ Specifically, higher inflation expectations may be observed for Q4 2025 and the next 12 months as their corresponding inflation rate indices rose from their Q3 2025 levels (see Tables 11a, 11b, and 11c). Consumers who anticipate higher inflation across all reference periods cited the following reasons: (a) higher food and grocery prices, (b) concerns over the effectiveness of government programs in tackling rising prices, (c) inclement weather and other natural calamities, and (d) tighter supply of food and other basic commodities.

Consumers' year-ahead inflation expectations were unchanged at 2.6 percent on a quarter-on-quarter basis (see Table 11c).⁷ This marks the fourth consecutive quarter that the forecast stayed within the National Government's 2.0 to 4.0 percent target range, indicating that household inflation expectations remain well anchored.

Expenditures of Overseas Filipino Workers (OFWs)

Figure 8
Usage of OFW Remittances (% to total OFW households)
Q3 2025 – Q4 2025

⁶ Starting Q2 2022, questions on the direction of the respondents' inflation rate expectations for the current quarter, next quarter, and the next 12 months were added to the CES questionnaire.

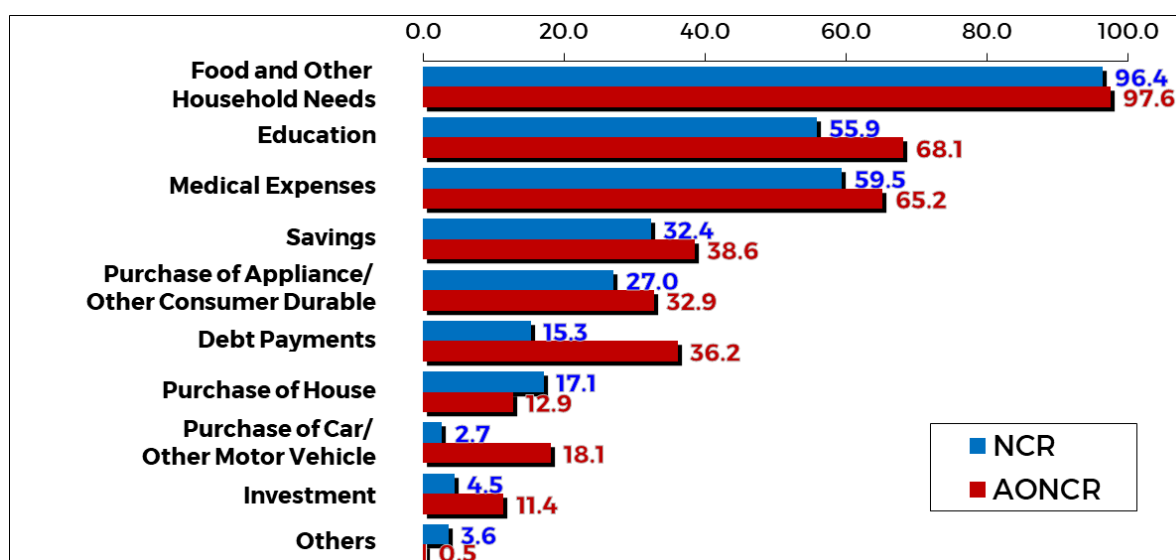

⁷ Derived from households' average inflation point forecast.

Of the 321 household respondents who received OFW remittances for Q4 2025, 97.2 percent utilized their remittances for food and other household needs. The proportion of OFW households that allocated their remittances for medical expenses (63.2 percent), purchase of consumer durables (30.8 percent), debt payments (29.0 percent), purchase/amortization of house (14.3 percent), purchase of motor vehicles (12.8 percent), and investments (9.0 percent) increased compared with the Q3 2025 survey results.

By contrast, the proportion of OFW households that allotted part of their remittances to education (63.9 percent) and savings (36.4 percent) declined compared with the previous survey results (see Tables 12 and 13).

Figure 9
Usage of OFW Remittances (% to total OFW households)
in NCR and AONCR
Q4 2025

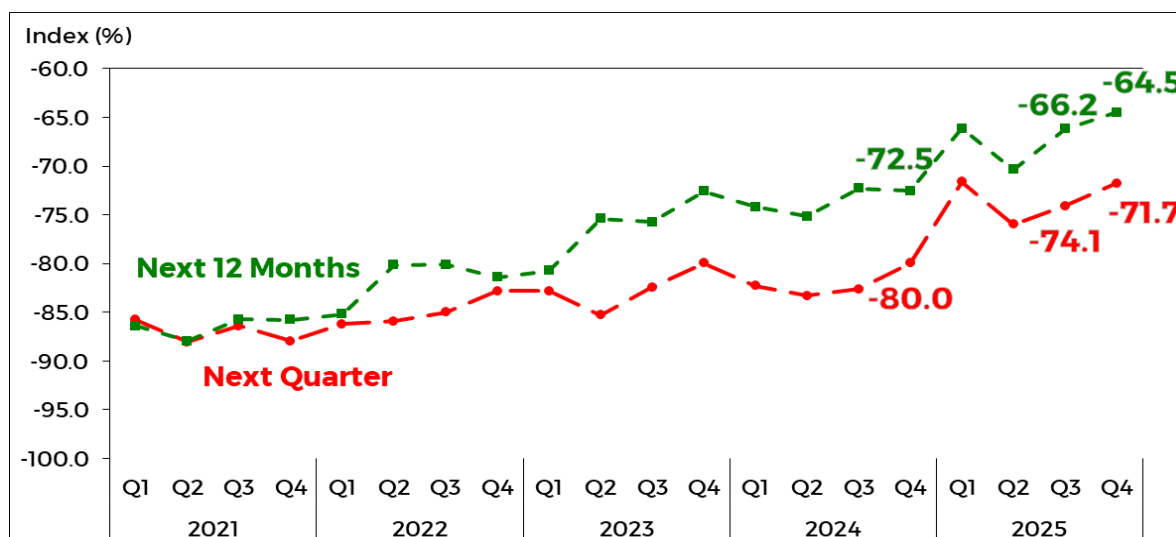

In terms of the utilization pattern of remittances by area, a higher percentage of OFW households in the NCR allocated part of their remittances to house purchase/amortization compared with their counterparts in AONCR (see Table 12).

Respondent's and/or Spouse's Debt Sentiment⁸

Figure 10
Borrowing Intention Index
Q1 2021 – Q4 2025

Consumer outlook on borrowing for the next quarter (Q4 2025) and over the next 12 months became less pessimistic. Specifically, the borrowing intention index for both periods turned less negative from -74.1 percent and -66.2 percent in the Q3 2025 survey to -71.7 percent and -64.5 percent in Q4 2025, respectively (see Table 15a). Meanwhile, the index on debt application experience was less positive for both reference periods (see Table 15).

About the Survey

The Consumer Expectations Survey (CES) was launched in Q3 2004, initially covering only the NCR. Starting in Q1 2007, the BSP expanded its coverage to include the entire country.

The Q4 2025 CES was conducted from **1-13 October 2025**.⁹ The CES samples were drawn from the Philippine Statistics Authority's 2023 Geo-Enabled Master Sample for household-based surveys, which is considered a representative sample of households nationwide. The CES sample households were generated using a stratified multi-stage probability sampling scheme.¹⁰

⁸ Beginning Q1 2025, only forward-looking questions on the respondent's and/or spouse's debt were retained in the CES questionnaire due to the streamlining of BSP surveys.

⁹ Approval for the conduct of the Q1 2025-Q4 2027 CES was issued on 15 January 2025 through PSA Approval No. BSP-2501.

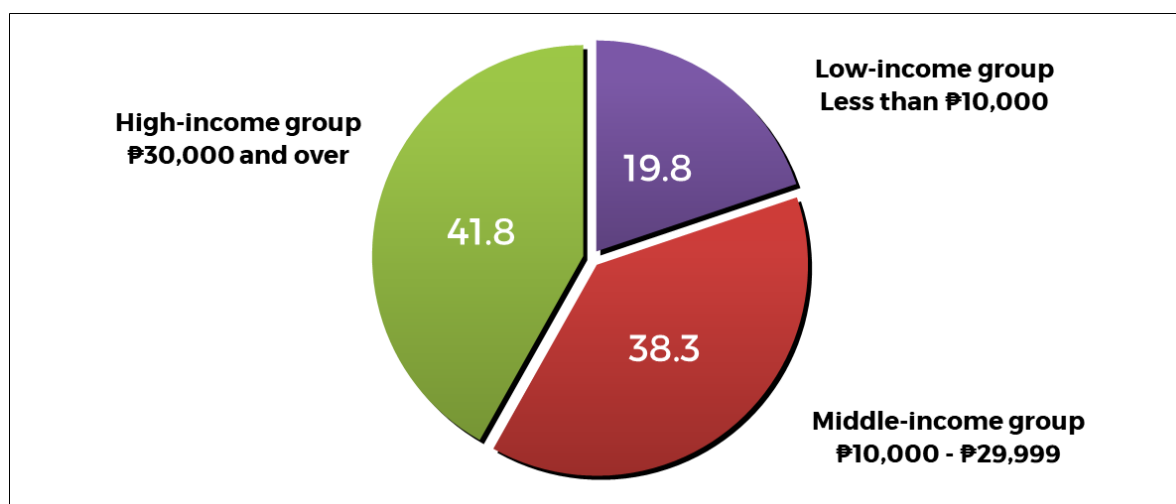

¹⁰ Each sampling domain in the 2023 Geo-Enabled Master Sample Design, in which geospatial data are integrated into the sampling units, is subdivided into Primary Sampling Units (PSU) (i.e., a whole barangay or a portion of a large barangay or combinations of small barangays), which are ordered according to the following: (1) north-south/west-east geographic location. (2) decreasing proportion of households with overseas workers. and (3) decreasing wealth index. Sample households are then drawn from each of the systematically selected sample PSUs.

In the Q4 2025 CES, 5,552 households were identified as eligible, with 2,468 (44.5 percent) from the NCR and 3,084 (55.5 percent) from AONCR (see Table 17).

Out of the identified sample size, 5,489 households participated in the survey, equivalent to a response rate of 98.9 percent (from 98.6 percent in the Q3 2025 survey). Respondents included 2,443 households in the NCR (with a 99.0 percent response rate) and 3,046 households in AONCR (with a 98.8 percent response rate). By income group, the high-income households comprised the largest share of respondents (41.8 percent), followed by the middle-income group (38.3 percent) and the low-income group (19.8 percent) (see Tables 16 and 17). The sampling error margins are ± 1.3 percent for the national results, ± 2.0 percent for the NCR, and ± 1.8 percent for AONCR.

Figure 11
Percentage of Respondents by Income Group
Q4 2025

About the Confidence Index

The overall consumer outlook index is computed as the average of the three component confidence indices (CIs), namely:

- Economic Condition refers to the perception of the respondent regarding the general economic condition of the country.
- Family's Financial Situation refers to the level of household income (in cash as well as in kind), savings, outstanding debts, investments, and assets.
- Family Income includes primary income and receipts from other sources received by all family members as participants in any economic activity or as recipients of transfers, pensions, grants, and the like.

The CIs are computed as the percentage of households that answered in the affirmative less the percentage of households that answered in the negative with respect to their views on a given indicator. A positive CI indicates a favorable view, except for the inflation rate and the peso borrowing rate, where a positive CI indicates the opposite.

Consumer Expectations Survey

¹ A quarterly survey conducted by the Department of Economic Statistics

² Low-income group refers to households with monthly family income of less than P10,000.

Middle-income group refers to households with monthly family income between P10,000-P29,999.

High-income group refers to households with monthly family income of more than P30,000.

Starting Q1 2019, the monthly family income is estimated using income from the respondent, spouse, other family members, and received OFW remittances.

¹ A quarterly survey conducted by the Department of Economic Statistics

² In Q4 2022, consumer sentiment in buying big-ticket items in the current quarter and for the next 12 months was included using the net balance approach (i.e., difference of the percentage of households with intention to buy big-ticket items and the percentage of households with no intention to buy big-ticket items).

¹ A quarterly survey conducted by the Department of Economic Statistics

² Beginning Q1 2025, only forward-looking questions on household savings were retained in the CES questionnaire due to the streamlining of BSP surveys. Furthermore, the question on the savings outlook was refined to better capture households' intention to save.

¹ A quarterly survey conducted by the Department of Economic Statistics

² Starting Q1 2020, the questionnaire was enhanced to include current quarter and next quarter expectations on selected economic indicators.

³ Starting Q2 2022, the questionnaire was enhanced to include expectations on the direction of the inflation rate for the current quarter, next quarter, and the next 12 months.

⁴ From Q2 2022 to Q1 2023, computation of the Inflation Rate (Pt. Forecast) was changed into the average of the expected range of inflation rate specified by the respondents.

¹ A quarterly survey conducted by the Department of Economic Statistics

² Starting Q1 2020, the questionnaire was enhanced to include sections on debt outlook for the current quarter, next quarter and next 12 months.

³ Beginning Q1 2025, only forward-looking questions on the respondent's and/or spouse's debt were retained in the CES questionnaire due to the streamlining of BSP surveys.

⁴ In Q1 2025, consumer sentiment in applying for a loan for the next quarter and the next 12 months was included using the net balance approach (i.e., difference of the percentage of households with intention to apply for a loan and the percentage of households with no intention to apply for a loan).
